

Project:

Planet Shrimp Waterproof Tank Lining

System:

Premera T7

Nukote ST-PW

Description:

The client wanted their PVC shrimp tanks to be lined with a coating that could bond to the surface for proper waterproofing. There was only about 4 feet of head room within each tank to work on. Premera T7 was the only primer that could achieve the bond that was required. All competitors' primers failed. Nukote ST-PW bonded well to the T7 and the project was completed successfully.
